

FOLD-A-BOT

Photocopy the page with the model or download the PDF from www.marshallalexander.net and print it out. Cut out the model and score all the foldlines. Don't forget to cut the lines at the top and bottom of the eyes. Fold over and glue A-parts to create the limbs. Put glue on back of B-parts and stick to inside of head (C-part). Glue the head (D) together while pushing the eyes inwards and **MAKE SURE** the arms are inside the head. Then glue E-part to the head so arms will stick out left and right of it. Now glue the body (F) together and glue G-parts to E-part to fix the body to the head.
